IT Staff Augmentation

Info724 Ltd.

Don't get locked into a limited talent pool. Leverage our industry-savvy technologists, programmers, analysts, and project managers to get your work done in a fast and flexible way. Rates: per hour (varies by skill set and level of experience)

Problem Statement - With an ever-changing economic environment, today's organizations are realizing ebbs and flows in their project portfolios. Even as growth within companies begins to stabilize, competition and controls in certain industries along with rising compliance requirements have prevented many companies from investing in long-term outlays to increase their permanent staff base. The result of this conservative approach often leaves a team scrambling for more time and resources from their already overloaded staff. The lack of a plan to accommodate for an unexpected influx of assignments can result in missed opportunities for financial gain, relationship building, and business knowledge expansion.

Additionally, most middle-market companies have lagged in the technology curve, thus forgoing many potential opportunities to improve their bottom line. So far, few of the industry's incumbents have capitalized on the use of advanced technologies, which are now affordable to even small businesses. Many companies have not boosted their automation nor streamlined their operations, partly because they do not know how to utilize outside help effectively.

Info724 Value Proposition - Info724 recognizes the urgency that companies need to maintain good will with their customers and deliver process improvements on time and on budget. Our staff of industry savvy technologists, programmers, analysts, and project managers are dedicated to supporting these efforts, bringing to the table a vast range of industry knowledge and technical competency. Our staff is available to help you with your critical, yet temporary, needs whether it is for the short-term or long-term. We are able to provide a seamless front as a representative of your team.

Info724 has a skilled pool of business people and developers who are armed with specific technical know-how and industry domain knowledge. Our personnel, with a wide range of experience in developing applications, customizing systems, and implementing process improvements, can help jump-start projects that are important to an organization's competitive position in the industry.

Management and Technology Consulting

Info724's Field Specialists - Info724 provides temporary staff members who are:
